First of all, Laptops arent really made for gaming.

Then the Celeron isnt really a game processor.

If its a Celeron D with 256 cache, and 533 bus u should be ok.

But it isnt so..

Onboard graphics arent really for gaming, even though i know someone whos still getting over 24 fps with a geforcemx onboard and a GOOD processor.

This game depends on cpu mostly.

16 - bit or 32 bit definitely counts for a card like this, Unless you're running over a ti 4200 i really think switching to 16 bit matters.
