So far, I have the permission system finished. It reads a command.xml file, and supports permission levels, command groups (irc, ingame), aliases, usergroups (renguard, no-renguard).

A command can be dependant on a specific module.
Any permission level can have any usergroup, ie normal users, voices, half ops, ops, ingame admins, ingame temp admins etc.

Take a look at my current commands.xml here:
http://mac.brenbot.com/commands.xml

This requires some more testing, but looks pretty good to me for now. Next on the list is the extensive plugin system and minor bugfixes.
