Now that's a nice gaming rig! Yeah the Radeon X300 is labeled a budget gaming card. But it will play UT2K4 anywhere from 80-130FPS depending on the detail settings, It will play Comanche 4 as well as basically anything else out right now that you want to throw at it. Then the 1GB of system memory really kicks it in the ass, making game load times faster.

GG for being like the only one on these forums with a half way decent rig
