kfcWhat?

There's nothing really wrong with his rig. It will do Renegade just fine and more. Sure your system is better, but who cares. This isnt a intardweb penis contest. Your just a show off anyways with your "but look at my system, its better" type of attitude.

BTW even though your system might be better, it still reeks of n00b. Xblade case with cheese ball 450 wall PSU. How gay can you get? Then you don't know what sound card you have installed? LOFL. Its like you just went online, found the stupidest fuckin looking case there is and then bought every other piece of hardware that everyone else says is "good". You should at least know what's in your system before you upgrade, dam

BTW the 1.24GB of ram you say you have is not true. Its 1.024GB or ram that you have. The 512MB DDR333 stick that you have in your rig is okay as long as you clock it to DDR400 and its stable there. If not it might be holding you back a little. But I doubt so, it should be fine.

Nothing like n00bs building their own comps!

You're also wrong about the memory, it's 1GB, not 1.024GB. Let me explain, 1024MB is 1GB, not 1.024GB. So it's either 1GB of memory or 1024MB of memory. Also, even I barely know what kind of sound card I have, mostly because it's integrated into my motherboard and all my computer ever calls it is nForce 2 audio. Does that mean I'm a n00b too? And as for the case, everyone has their own taste. Just because you don't like his case doesn't mean he sucks at building computers. I think the case looks pretty cool, I like the side of it.

Here's my case. Oh, oops, forgot, I'm a n00b because you don't like it.
