Subject: Rengaurd gone to poo

How about using the English language.
What exactly happens? Renguard loads up, you can click "Renegade" to start Ren, Ren loads up fine, and then it says you're not using Renguard from within Renegade?

If so, check to see wether gayspy/All Seeing Eye/RenIP what-ever is passing the correct name to Renguard.
You can do this by checking the text in Renguard (before it loads Renegade) to make sure it says "Welcome 2000_years" (or your name). If it's different to what it says ingame then it'll think RG is off.
