Thought i would post this here for server owners who don't have access to the owners forum.  
Note: To use this you need VNC style access to your server, it isn't an IRC bot (ill add it into FACTBot for the release).

OK, finally got around to finishing the latest app. BRCP (Brenbot control pannel) is basically an updated version off the previous 3 apps (rec renamer, HashBans and BR Cleaner) all merged together in one nice GUI (Thanks to [Fireon]Deltafox for the images), and a join message viewer/changer.

btw, this isn't in any way official, has nothing to do with BHS and mAc/blazer know nothing about it, so don't ask them for help with it. Ask me.

Main changes:

Cleaner:

[list]Cleaner now reads the tables from the database and allows you to choose which one you want to clear (apart from the modules table, which ive stopped you from clearing). This means it will now work with older versions of brenbot.

Dodgy descriptions of what the tables hold so you can decide if the table is safe to delete (dodgy cos its just form me looking at the database and guessing).

You have the option of vacuuming the database (to make the file size smaller) or leaving it and having slightly faster access times (fully explained in the HTML file in the compiled version).[/list:u]

Rec/N00b manager

[list]This replaces the rec renamer. You can now count the recs/n00bs belonging to anyone listed in the brenbot.dat file.

Delete the recs/n00bs beloning to anyone listed in brenbot.dat.

Change the name associated with someones recs in the .dat so people can keep their recs even if they want to play under a new name.[/list:u]

HasH Bans Manager

[list]Add/delete serial bans in brenbot.dat

Import/export all the serial bans in the dat file from/to a text file to allow you to share them between servers[/list:u]

Join Message Manager

[list]Change anyones join messages in the dat file.

Delete someones join message from the dat file all together.[/list:u]

Oh, and its now under GPL so you can use the source code under that licence too (downloadable from the website).

to get it go to:

<http://www.ruddles.com/info.php?id=BRCP>

Again, any comments/suggestions, contact me however you want.
