---

I've been playing Renegade for a month now and since 2 weeks I've been playing it online. This has never been a problem.

When I saw that Core Patch 1.3 was out I downloaded it and try to install it this didn't work.

When I tried to play online after that I got something about skins and model textures.

I looked it up and they said I had to remove everything that ended with dds.

I did that and then nothing worked at all.

I got CRC Mismatch and later Renegade not found.

I removed everything from my computer that has anything to do with Renegade and reinstalled it.

First I installed Renegade then Rengaurd en then the Patch.

Now I get this when I Want to play on a server (doesn't matter which one)

Quote:[10] Trying to connect to server #1...Connected

[10] Secure link established.

[10] Welcome to RenGuard , Kornellica21!

[10] To launch Renegade, please click 'Renegade'.

[10] Unauthorized file game2.exe has been found in your renegade directory

[10] Disconnected from RenGuard network

I tried to remove game2.exe but then it didn't work and when i tried to remove game.exe he couldn't find Renegade. And changing game2.exe to game.exe didn't work either.

Does anyone know how to solve this problem.
