Okay I've reinstalled everything that has something to do with renegade that means Renegade, Gamespy, Renguard, Patches and Mappacks.
I restarded my PC installed Renegade and Gamespy.
Gamespy offered me to download patch 1.037 so I did then I tried to play online which worked but because I didnt 'have Renguard running they kicked me off!
So if I install Renguard and I have the problems again the problem is Renguard.

Would you all cross your fingers for me 2 days without Renegade online is to much.
