Majiin Vegetablah blah blah

j\_ball430Majiin Vegetalinux time?

If I can get my desktop to 1280x1024. :\

eh ?

linux does not allow a desktop that big?

why would you need it that big

Saves a LOT of room. I had my resolution at that for a long time. Anything bigger than that is too much though.

Quote:

SP2 Didn't do a thing to me. I haven't had a single program not run because of it. You don't even really notice it. Like I said in the other post. When you install it, you need to go to the control panel and disable Windows Auto Virus Scan, and Windows Firewall. That is it. Other than that you won't tell the difference between Windows XP original, SP1, or SP2. If they had to reformat their computer when installing SP2 there's prolly a greater issue at work there than SP2...

icon\_rolleyes.gif

The good thing is that if someone does have problems with SP2 to the point where they want to revert to SP1, all they have to do is go to the add/remove programs panel and simply uninstall it like any other program.
