J_ball, what linux distribution were you using? I'm pretty sure Redhat supports 1280 x 1024 ...not certain though since I use 1152 x 864 @ 60mhz.

Anyway, SP2 gave me a shitload of a problems with Steam, Bit Torrent and Firefox to begin with and the first itme I got it I had to do a full format because it uber-fucked my system. (And believe me, I keep my computer clean as a whistle so the only logical thing that could have caused the uber-fucking of computer was the installation of SP2)
