icedog90I'm stuck on 1024x768 because my crappy 17" monitor will be blurry if I set it any higher. Plus, I can't have 75hz at any higher resolution than 1024x768.

I am using a plasma TV as my monitor so 1024x768 is the highest it can go, but it is plasma so it it is extremely high quality. I have a 19" monitor set up behind it, but I don't use it much anymore.
