http://us2.php.net/manual/en/language.operators.comparison.php

$a == $b Equal TRUE if $a is equal to $b.
$a === $b Identical TRUE if $a is equal to $b, and they are of the same type. (introduced in PHP 4)

If you compare an integer with a string, the string is converted to a number. If you compare two numerical strings, they are compared as integers.

Automatic Type Juggling

I have been coding PHP for 5 years, I know what I'm talking about.
