...my Ren disk died. Cracked straight from the inner rim to the outer. Figures it would do that right when I'm starting to get back into the game again, but that's just luck being a bitch again. Time for a trip over to the nearest bargain bin. At least it didn't explode- I would have pulled my hair out if I'd have tried to boot up Ren and found a wrecked DVD-RW drive with disk bits embedded in its innards.

Ugh. Couldn't have come at a worse time. I need those few extra bucks to buy myself a new joystick... [/rant]
