DJMGetting another CD key is simple, go into C: Drive and press ctrl + a, then backspace then enter.

This is a folder created by westwood to stop gamers using false serials, delete all the folders on the C: Drive and any serial (even 0000-00000000-000000 ) you enter in the installation will work. I tried it...Now what?

Renegade doesn't seem to work right. Did I do something wrong? Help me please.

Anyway, this CD authentication thing must be a problem on the server-side.

I played many, many games with my valid serial. Then one day, I joined a server I hadn't before, and it gave me that error. It did it to me on a non-dedicated too. But immediately after, I joined another server and it worked fine.

Odd thing though was that the server that kicked me out because of my CD key had about 6 people in it already, so I don't know why it worked for them and not me.
