Ok I accidently broke my CCR CD when I was moving into my apartment (it got stuck under my desk leg). So I downloaded a no CD patch for it and it worked fine and have never had problems with it.

Now since there are a whack of cheates on CCR now I want to install Renguard but when I do I get this message "Unauthorized file game2.exe has been found in your renegade directory".

This has to be from the No CD patch that I downloaded. CCR is different, like people make sounds when you kill them and the oblisk charges up and I thought that it was working but then was booted from a game for not running RG.

Im a decent player and it sucks when I get kicked because I play good. Everyone thinks Im a cheater, which I am not. Please if anyone can help me out I would appriciate it.

Thanks
