The site is BEST viewed on a 1024x768 resolution because that was what it was made on. 1024x768 is one of the most common resolutions used. Id rather use codes such as <td width="100" height="100" than using a code such as <td width="100%" height="100%" because it is a pain to work with. (Or i just havnt figured it out yet)

Question: Could anybody find or give me a picture of the Renegade name that is really big, that way i can shrink it down so my rengen logo is not pixlated.
