They take the current drivers and tweak them. A lot of small features that NVidia doesnt have. Beware though that if you install these drivers NVidia will not help you in any way because you installed a modified driver. In my opinion there much better than the standard one. They have 71.84 out right now but I imagine the .89 will soon be available. Also they are working on modifications for the Catalyste drivers but they havnt released one yet do to time constriants!
