trunkskgl never got this error until I re-installed Renegade last week. Last time I played was January, and this never happend.

when I install fan maps I get this error.

"The application or DLL C:\Westwood\Renegade\C&C_BunkersTS.mis is not a valid windos image. Please check this against your installation diskette."

If I add 50 maps, I get that error 50 times. If I install 1 map, I get 1 error.

It comes up soon as I double click the icon to launch, and once again after I launch Renegade from RenGuard.

Can someone help ?

Did you install the maps to your data folder or your ren folder? Sounds like there in your ren folder so just copy and paste every C&C to your data folder and all will be kosher!
