PCI cards dont suck. On my PCI 128MB Xstacy card I run Doom 3 on high graphics and it runs perfectly fine. If you cant run games on a PCI, its not the card, its your pc.

AGP and PCIE are better though.

EDIT: And it is not just your card that plays the key role in good gameplay.

So do these:

Processor

RAM

Graphics card

Monitor (Refresh rates)

and more...
