Get Renegade FDS, and a serial. Then youl need to download BR.net ore Brenbot. You have to know a couple of things about the fds to configure it.

Once thats done you are basicly set.
But whats a fast internet c0nn? Download is nice but it isnt what your server need. Its the upload. And something like a Dual Core cpu to run renny, and Renegade at the same time, ore a other machine on your net work
