hello, this is a new problem that i just started having; i start up renegade using WOL or ren ip, i've tried both: connect to renguard; it says that i am connected to server 1 and when i use the locator at your website it says that i am not found; i join half renguarded servers and use the !rg or !forcerg

command and it says that i am using renguard; i have uninstalled and reinstalled renguard, used different nicks, and used WOL and renip to connect but it still says that i am not found on the locator; this seems to occur only on the locator as i said when i check on half renguarded servers it says im using it..... any ideas? i also checked my firewall and couldnt find anything out of the ordinary, but when i start ren it says that i am connected to renguard, so i don't know what is happening?
