emperorz0You all Firecrap users must have crappy computers if you have so much problems with IE. IE may not work well with crappy computers.

Nobody said Internet Explorer doesn't work right, my Internet Explorer works fine.. However, there are hundreds of exploits out there that target primarily Internet Explorer. We are worried about all the crap (spyware, trojans, viruses) out there targeting Internet Explorer. There are other websites that target Firefox, Opera, Netscape, etc. too.

If you want shitloads of spyware on your computer, please continue to use Internet Explorer.
