I just bought myself an ATI All-In-Wonder 9800 Pro (128 MB version) and I've had nothing but trouble with it. ATI's customer service has been pretty poor as well. They insist it is a driver error, however, I have reformatted my entire system and re-installed the drivers by their step by step procedures, all without any solutions...

The problem is that the card does not perform nearly to what a card of it's calibre should be, my brothers 9600 runs way better than my 9800 does. That and the TV tuner crashes randomly, without any error codes...
