I have been having problems with this. I run windows xp, and my renegade sometimes crashes when i die and a lot of the time if i go afk for a few minutes and then sometimes it just crashes, the last three crashes i experienced was within 15 minutes and was on the map "sand". It has crashed around ten times in the past two days.

" Then use a program such as WinRar or 7-zip or something to display the CRC32 of the exe file"

The CRC32 is 70909BE4

and what exactly am i meant to do with that dependacy program?
