Sir PhoenixxDaveGMMI'm NOT saying that we didn't eat before gasoline was discovered (not invented).

Crude oil was discovered, gasoline was invented. (To make gasoline, we have to refine oil, and mix certain chemicals together, etc., so gasoline itself is an invention.)

Even if you do find an alternate means of creating energy tomorrow, you still need to find a way to efficiently implement it in every single current-generation vehicle that uses gasoline. Isn't diesel an oil product as well? If that's the case, then you'd need to find an efficient method of implementation for roughly 95% of every vehicle on the planet, correct?
