
Subject: Suggestion for the next update on Renguard....

I'd like to see an auto map downloader integrated into Renguard.

I'm pretty sure that Renguard knows the map rotation in the server that a player is in and I'm confident in saying that Renguard knows if that player has the map. I want to be able to have Renguard automatically, of course with permission, to download maps needed to continue playing in a server. It would save a lot of time and fanmaps could be played more often.
