Make a folder called "reborn" (without the quotes obviously) and copy paste everything from your renegade folder into the reborn folder, only don't copy the data folder!

When you install the reborn mod, install it into the reborn folder.

Then when you get a shortcut on your desktop, DELETE it. Then open the reborn folder and find a file called game.exe and double click it.

But to be honest, you are better off waiting for the new version which should be ready in about 3-5 months according to the team in an interview.
