I posted a reply on sum1 elses banned post and according to most people in their said i should post my own as that guy was talkin out his ass!

ok here it is:

A few weeks back I d/l an M16 (which in hinesite I still think is cool) and put this in my data folder, opened renguard, clicked renegade an proceeded to play. after joining my favourite server (XilServer) I gotta pop-up tellin me to get renguard! so I exited and did the same thing (as sometimes when u change ur login on WOL renguard is signed unda a diff login) clicked renegade and proceeded to play, but alas I got a pop-up again. So I went back loaded up renguard and waited this time. Then I got a msg from renguard sayin "you have been banned by mac on same date for tryin to bypass renguard, you have been disconnected goodbye!"
Now I have recently learnt that w3d files are considered dodgy and I needed to get them checked by renguard 1st, the M16 skin that I got was a w3d file.

So what I am basically asking is can I get unbanned? I miss my renguard, its sux not bein able to donate anymore

thanks
