Failing to creat game channel isnt anything to do with mIRC, its when the FDS logs into the wol system and attempts to host the game.

BRenbot is the one that connects to irc. If thats what is displaying "Disconnected from IRC "irc.blabla.com"" then either just restart the bot, or make sure you have the correct irc channel and server in your brenbot config.

If that doesnt sort it, PM me and ill help you out further.
