nestleq wrote on Wed, 13 July 2005 21:09ok first thing jackass!Ouch. I think I'm bleeding.
Quote:you do not need to respond if your not going to help,I'd help if I thought it was a valid
request as opposed to an asinine query typed some someone who obviously failed English 101.
Quote:second most of all fw have serial numbers witch can be found, i don't know where mine
is....thats why iam asking!I'll assume that means "Firewall". As far as I know, Windows XP
Service Pack 2's Firewall doesn't have a serial number; it uses your Windows XP serial number
for verification purposes, as part of Service Pack 2. Are you running some sort of outside
Firewall? Or do you perhaps mean a router of some kind?
If you meant a router -- "A device in a network that handles message transfer between computers"
-- then I suggest you do a little research on that type of computer hardware. Your router's serial
number should be listed right on the hardware, generally on the bottom. Once you have the brand
name and the serial number, a Google search should help.
If you're running some sort of application Firewall -- "Any of a number of security schemes that
prevent unauthorized users from gaining access to a computer network or that monitor transfers
of information to and from the network." -- then I suggest you hit the Firewall's personal website.
ZoneAlarm's website, for example, can be found at http://www.zonelabs.com/. Again, a Google
search might also prove fruitful.

There. I've helped. Happy now?

Edit: We can see your username, you know. It's wholey unnecessary to "sign" your messages at
the tail end like that. This isn't e-mail.
