Quite simple.

1. Download it.
 2. Extract it.
 3. Start it, to see if its working properly.
 4. Download SSCP1 for Linux, it contains the wrapper, custom scripts and brenbot and much more.
 5. Run the installer
 6. It updates your installation
 7. Configure brenbot
 8. Start the wrapper
 9. Start brenbot.
 10. You are done.
