...C&C95 and all other pre-1998 games are practically guaranteed to not work for beans.

You can easily make those games run on xp if you know what you are doing.

Not really, even with the fixes and tweaks to make c&c95 work on xp, you still get errors, cant play online.

There is another solution, which works well. Partiton your computer. I got my comp running windows 98se/ Xp Pro.

I can play all my old games and us emy old programs this way.

So when longhorn comes out you could do windows98se/longhorn.

Though it is, in a way alot of work, but after its done, its kickass
