Tiberium Hunter wrote on Sun, 31 July 2005 05:03I got a question: if renVis will allowe us to watch a game, shuldn't it make the game laggy? like posting it in a and watch the game website as you mentiond before, many people could watch it.

Not that much. Enabling renVis live-replays on the same machine as the game server wont speed the game up; but it causes much less traffic than a normal player.

However, there is no need to run the replay / www server on the same server. In any way; the live feature is not implemented yet, we will have to wait and see what the first practical experiments will reveal ...
