Right now, we have no ability to change the installer because 1.04 is not ready for distribution yet, so we have to deal with what we have.

That link sounds a bit like.. but I am talking about a page which is displayed to people before they can dl RG.

That shows them with screenshots, how to install 1.037, how to install renguard, how to get the no cd crack, how to install cp1.. also ,how to deal with the common errors, ie "unknown game2" and stuff like that. We get literally thousands of questions about this stuff.
