well when i put the cd in the auto run thing pops up.. i press install.. then it goes through a cinematic and when it get to a part where it said 'upgrading weapons' then it says 'targeting system on-line' imediatly after that it does some kind of transmission out thing then it cuts off... and does NOTHING... i figured it was a problem with the cd so i went out and bought another copy. i popped it in and it did the SAME THING... so maybe its my system... im using win xp. anyone using win xp ever have this problem?and did you fix it? how did you fix it? can anyone tell ME how to fix it?
