feel free to post some pictures...cause they aint any.

The two photographs in question 2 show the building just after the attack. We may observe that the aircraft only hit the ground floor. The four upper floors collapsed towards 10.10 am. The building is 26 yards high.

Can you explain how a Boeing 14.9 yards high, 51.7 yards long, with a wingspan of 41.6 yards and a cockpit 3.8 yards high, could crash into just the ground floor of this building?

lol whers the fucking hugh plane in any of them...

http://www.asile.org/citoyens/numero13/pentagone/erreurs_en.htm << please have a look at this...rises a few Qs..
