I like the care that has been given the detail in those weapons as a whole

But, please keep something a surprise for when you release this mod stop showing us everything or we will just get bored of it very quickly I feel I know the entire mod already. I want to play the stickman mod more than I do Reborn right now as it has a great element of mystery about it even though yours is clearly better.

But go on, make the M680 minigun firing sound a little meatier
