After weeks of development and testing, they are here. The scripts are fully approved by our fellow community member and author of BR.Net - Dante. The download is for server administrators only, so there's nothing needed client-side.

They are available for download in a compressed installation file where everything is pretty straight forward. The scripts require mIRC, a server and a full working version of BR .NET.

Download the scripts :
http://modx.renevo.com/showthread.php?s=&postid=546#post546

Also, please be sure to check the readme before installation.

Enjoy!
