Mighty BOB! wrote on Wed, 28 September 2005 16:09Ok something weird has happened. I've been using RG for quite a while & I have never had any problems with it right up until today.

Today I started RG (as usual) & clicked launch Renegade & it all started just fine (as usual). I went to WOL & then Advanced Game Listings & all is working fine, I can see & select all the servers, but whenever I try to join any server I get a version mismatch all of a sudden. It has never done this before ever, it has always worked.

I'm fully updated to my knowledge (unless a patch for something has been issued between yetserday & today). I'm using RG 1.03 with CCR updated to 1.037 & also CP1 installed. I really have no idea what is going on.

[EDIT] Ok I have no idea what that was all about but it is working now after I rebooted. [EDIT]
I get it too, it's usually just a spurious error message...
