---

Hi, i have renegades installed on my comp at home but at the moment im trying to install it on another computer but as soon as it starts the autorun it stops and says something about (a problem has occured and setup has to end) i dont know why it worked fine on my other comp just not this one. Im running

windows xp

home edition

ver 2002

service pack 2

any help would be cool just want to start the killing again
