Trying to connect to server #1...Connected

Secure link established.

Welcome to RenGuard , Colajunky!

To launch Renegade, please click 'Renegade'.

So much for that, but if I join a server, it still say that I need RG!?

No Firewall, but router. On the 2nd computer Renegade works with Renguard without problems.

I can play, but those auto-server-messages can drive you crazy if you're in a hurry.
