A .iso file is basically a copy of a disk that's on your hard drive... You can use DAEMON tools to make your computer think that it has more CD drives than it actually has, so that the .iso file acts as a CD in a CD/DVD drive. Using that, you'll be able to install WOL, though you need a serial code...

Or you could just try unzipping this, and putting it in your SUN/Internet folder. I don't know if it'll work though.
