Hey there.

I be working on map for lil while now im taking my time ;D every thing is fine but I created a addition ladder at the side of the HON. thats all fine only problem is when i save the map bla bla export. mix and go to host the game for 1 player to test

I dont see a ladder at the side of hon but if u press E in place the player will climb in fine air and end up on top of the hon. now i was goin to settle with that.. but I thought to my self why should I =/ Ive come this far ;P

Its dont really make too much sense does it.. you see I modelled the entire map in renx, so.. why when i host the map the player can stand on the map but u cant see a ladder i also added it makes no sense =/
