---

Renguard keeps saying that this that my game.exe is haxed or something. This only happens when I try to reconnect to a server. If I wait like 2h or reboot my comp RG won't complain anything regarding to haxed game.exe. Can this be cause of No-CD patch? I am using the one found in these forums ('RG compatible No-CD').

Resolved: It seems that problem was TASE incorretly pointing to Renegade.exe rather than Game.exe
