Ok im not sure if this is a renegade prob or a renguard prob but here it goes. i will be in the middle of playing and out of no where the game will freeze for about 10 secs with no sound then the sound will come back and the game will unfreeze in about another 5 secs.the game will come back but it ends up freezing again usually and i end up getting disconnected from the server. about 1/3 of the time when this happens renegade shuts down and if i close everything down and try to restart i continually get error msgs and windows trys to send to microsoft also when renegade starts up it goes throught the westwood config and after that i get the errors. the other 2/3 of the time renguard disconects and all the servers say im not connected to renguard. any info would be much appreciated. i have tried to uninstall rg and ren just to reinstall with no luck. when i uninstalled i tried to delete everything i could find including stuff in the registry.
