Sorry for not checking back earlier.

I didn't get any notification by email, the Email provider changed the spam-settings to Pitbullmode or something

I had a Virus which came in by abusing some weaknesses from the IE6 and infected some files. Sheesh, I cleared all and did format C: and D: and E:

I think this Virus (whatever the name was) has altered the always.dat. Sorry I haven't find out this earlier.

BTW, RG does a good Job and yes, I tried to login again after this issue but still the same again.

Now, I use Win2000 and can't play RGprotected because of the well-known "Buffer-Overflow" *whine*. I got a new comp in two weeks, then WinXP is coming back.

THX for all replies, thinking about it and being patient !!
