Subject: still having problems
Posted by PlastoJoe on Sat, 22 Oct 2005 05:47:17 GMT

Well, I've uninstalled RenGuard and excluded the SVKP file in Norton Anti-Virus. But that was after I had already quarantined the file and then deleted it from quarantine. And now it still won't work. I get the GameSpy error message, but not the Norton one, which is a start I guess. I still have the RenGuard installer and I've tried reinstalling it multiple times. But the SVKP file never shows up in my system32 file.
