Renegade likes to crash on me at certain specific points on certain specific servers. Like, when I play on any of the UNRULES servers, my Renegade client always crashes whenever one of the buildings, whether my team's or not, gets destroyed.

There's still bunches of apparently random crashes in other servers, but they're a lot less common in WOL servers than in GSA servers, so I've been playing in WOL a lot more.

Dunno what to tell you.
