jonwil wrote on Mon, 24 October 2005 00:25I have been posting some scripts.dll internals stuff here:

<http://www.renegadewiki.com/index.php?title=API>

Is this usefull to modders?

Is there anything people would like to see me add (thats not already there?)

Is there anything non-internals related people would like to see? (I already see "beginner scripts.dll tutorial" there).

Would a list of all the scripts in the dll with details of all of them be usefull? (or would that just be a waste considering what the readme files say, what should the stuff on the wiki say that the readme files dont)

Any particlular "how do I do x" scripts related items people would be interested in?

Been following my lead then.
