Bypass renguard lmao, I know its possible but I wouldnt have the faintest idea how to do it. Not that I need to cheat, I get banned etc for just being so good...the only person who can put me to shame is slickbud...and do you think he cheats? I would like to see some proof that I cheat, and an explanation of the basis for the ban. I would have and will gladly submit to any cheat test at any time to prove my innocence. Hell I will even pay your $30 fee. I don't mean to acuse you guys of banning me just for trash talking - perhaps it was just a mixup with IP addresses, or something else (I really have no idea about RG or cheating).

I will share a little secret with you: I used the first version of final renegade in a game I hosted once, along time ago when I was a n00b, to test it out. Obviously things like fully-automatic mammoth tanks made the game lag worse than RG and hence I didnt use it again. Once I left that game I went into the HazTeam server without restarting ren...Obviously FR was still operating even though I had removed it from the data folder... I killed a mod in one hit and was like OMG! and left the server immediately after I realised it was still on. I didnt go back into the HT servers for a week or so, as I was scared shitless that I would be banned. Luckily, I wasn't so much as temp banned for it. From that day, I have NEVER used a cheat - not even for testing purposes.

At least I'm trying to run Renguard despite the greif it gives me...
